Scholarly Activity

September 2013 through August 2014
Stockton College is proud to present its annual Scholarly Activity Booklet, in recognition and celebration of the exceptional work completed by our students, faculty, and staff over the past year.

The information contained within these pages truly represents the depth and breadth of activity undertaken by our community of learners. This booklet truly symbolizes the best of our institution: outstanding scholarly research, meaningful academic exploration, and exciting creative expression. Collectively, these efforts play a vital role in supporting the College's strategic themes of Learning, Engagement, Global Perspectives, and Sustainability.

The quality and reputation of Stockton as a distinguished institution of liberal arts, sciences, and professional studies are evident by the achievements recorded within these pages. The rich variety of these scholarly efforts leads to a more vibrant campus, a more inspired faculty, and a more engaged student body.

On behalf of the Grants Office and the entire Division of Academic Affairs, we congratulate all those who have played a role in this year’s scholarly efforts. We are both grateful and proud of the academic, artistic, and cultural contributions provided by the Stockton family.

Dr. Harvey Kesselman
Provost and Executive Vice President

Stockton Instructional Sites

Woodbine  Hammonton  Carnegie Hall  Manahawkin
The arts and humanities are flourishing at Stockton and nowhere is this fact more obvious than in the scholarly and creative productivity of the ARHU faculty. The following pages provide a record of faculty achievement: in the numerous successful applications for internal and external grants, and in the performances, exhibitions, and scholarly presentations and publications that those awards help make possible. The variety of projects represented here is impressive: we see faculty engaged in archival research in New York and Paris, in research on world language learners in New Jersey and on music education in Africa. We see performances of dance in Lebanon, jazz and classical music at the Jersey shore, and are introduced, through workshops in Rhodes, to the process of translating and staging a modern Greek play for American audiences.

As the above examples make clear, our humanities scholars have participated in professional conferences all over the world, presenting their scholarly work while also playing integral roles in the professional organizations central to their disciplines. They are well-published, contributing reviews and articles to scholarly journals and essays and chapters to book collections, often while pursuing book projects of their own. Our artists have produced works that have been performed and exhibited locally, nationally and internationally, while also contributing their expertise in juried competitions and in presentations on other artists’ work as well as their own. ARHU is very proud of its faculty’s ongoing productivity, which both complements and bolsters its strong reputation for teaching excellence.

This record also shows the ways in which ARHU bridges divisions between the arts and humanities and among the disciplines. Some Communications faculty, for instance, produce scholarly work, while others produce creative video and documentaries. In Literature, too, faculty publish scholarly articles, introductions, and books, or imaginative work—poetry, fiction, and creative nonfiction. Our musicians both perform and lecture on renowned musicians and musical history. Collaborations between faculty in artistic or scholarly disciplines are frequent in ARHU, yielding performance pieces, publications, and exhibits that have their roots in history, in literature, or in philosophical inquiry.

We firmly believe that the quantity and the quality of ARHU faculty output, its breadth and its depth, compares favorably with that of any public liberal arts college in the United States, and that it will continue to do so. In this regard, it is now and will ever be an exciting time to be working in the School of Arts and Humanities.

I am pleased to present the many activities of the School of Business faculty in AY13-14 as detailed below. It was plainly a productive year for the School, with a broad cross section of our faculty members reporting activities this academic year.

The mission statement for the School of Business says about research that “The faculty actively pursues scholarly activities and professional development that contribute to classroom effectiveness” and that “The faculty produces scholarly works that advance the knowledge and practice of business, hospitality and tourism management, and computer science and information systems.” Congruent with this mission, it is important to note that these works span the whole range of scholarly activities, including disciplinary based works, learning and pedagogical research, and strong contributions to practice. Themes of note this year include economic development strategies applied to locales from Atlantic City to Asia, new technologies and applications of computer science and information systems, considerable work on assessment of student learning, and several works on teaching innovations and strategies.

This listing of scholarly works again highlights that the business faculty is a group that is diverse along multiple dimensions, striving hard to make a positive impact in the lives of our students, our disciplines, and our communities.

The School of Education faculty and staff scholarly activities summarized in this section of the report span a wide variety of topics ranging from assessment to international education to economic, social studies, mathematics and technology-based curriculum and instruction. Many Education faculty members gave presentations of their work at regional, national and international conferences; several have published articles in scholarly and professional publications; several more have earned sponsored project awards to develop or continue their research; and some have completed a book project this past year. On behalf of the School of Education, I’m delighted to share the following summaries of these achievements with you, and I look forward to presenting similar reports of future contributions already underway for the year ahead.

Led panel. (19-20 Sept 2013). “We have something to say: Collaborative models of undergraduate research in the Cultures and Languages Across the Curriculum (CLAC) classroom.” Richmond: Binghamton University – SUNY, at the CLAC Annual Conference, sponsored by University of Richmond.

Scholarly and creative output in the School of General Studies covers a significant breadth of endeavors largely due to the fact that we have a very diverse group of faculty working in many different fields. Generally speaking, this work can be divided up into four groups: Many faculty members undertake pedagogical studies, which is not surprising given that many of them have the responsibility to teach freshmen writing and quantitative reasoning skills, and their research grows out of and complements their teaching; several faculty work in the field of Holocaust & Genocide Studies, both in terms of scholarship and analysis, as well as in the collection and editing of our widely acclaimed Holocaust survivor memoirs; a third group works in scholarship pertaining to other fields such as literature, communication studies, along with cultural and environmental studies; and a final grouping, centered in our Writing Minor, publishes and performs poetry, drama, fiction, and creative non-fiction.

Emphasis on the complementarity of scholarship, creative endeavor, and teaching is growing, so this and the arrival of some new faculty members, bringing new creative and scholarly talents, suggests that there will be a flourishing in the School of General Studies in the coming years. We look forward to the School building on this year’s impressive achievements.

Faculty members in the School of Health Sciences are committed to excellence in teaching, scholarship, and service. In their role as scholars, faculty strive to make meaningful contributions to the advancement of their fields. They regularly conduct research and share findings through publications and presentations to state, national, and international professional communities. Student-faculty research is valued and faculty members often mentor Stockton students through the research process.

The works described in the following pages represent the breadth and depth of the health sciences disciplines in the School, and reflect the commitment of our faculty and students to improving the health and quality of life for all people. Highlights of publications and presentations include: how cancer rehabilitation may improve function in survivors and lower the economic burden on society; comparison of costs for patients undergoing knee replacement; an exploration of the fairness of the Affordable Healthcare Act; communication and social intervention in autism; factors influencing pregnant women who choose labor after having a Cesarean; occupational therapy processes in mental health populations; cultural considerations of the long-term care workforce shortage; and predicting fatigue in patients with Type 2 diabetes. Earlier this year a member of our faculty served as a Fulbright Scholar in South Africa and shared her expertise on HIV-AIDS rehabilitation, cancer research and integrative medicine. External grant funding supported study of such topics as the academic progression of nurses, antimicrobial and wound healing properties of a unique agent, and a wellness program for individuals with developmental disabilities. Faculty members also explored international learning experiences for students in Haiti and Bogota, Columbia.

In addition to scholarly efforts in their health-related disciplines, School of Health Science faculty are committed to efforts which directly improve student learning. Scholarly work in teaching and learning explored a range of topics, including: a comparison of case delivery methods; a concept-based approach to learning; and use of a teleconsultative model in developing countries. Faculty members presented on the development and foundational competencies of the Bachelor of Health Sciences curriculum, which is a model for interprofessional education. Devoted to serving the community, faculty members also gave of their time and expertise. This year, examples include service on a number of editorial boards, membership on the Professional Advisory Council for the American Board of Disability Analysts, and a committee chair for the New Jersey Occupational Therapy Association.

We proudly share the remarkable contributions the faculty members of the School of Health Sciences are making to enhance our communities.

Faculty and staff of the School of Natural Sciences and Mathematics research and scholarly endeavors as contained in the current issue of Stockton’s Scholarly Activity Book continues to be recognized regionally, nationally, and internationally. A hallmark of most of the scholarly activity involves undergraduate and graduate students working in close collaboration with their faculty mentors on cutting edge real world research. This is the unique nature of a Stockton degree in Science or Mathematics and has resulted in the enrichment students acquire through these efforts. Faculty quite frequently present their work at professional meetings with their students listed as co-authors and many students have also done the same.

It is important to note that faculty research and scholarly endeavors continue to range from local to global in scope. Faculty and their students are studying the impacts of pine bark beetle infestation in the Pinelands Preserve, to sea grasses in Barnegat Bay, to nearby off-shore artificial reef habitats as well as “ghost” crab traps located and retrieved through the use of hi-tech Side Scan Sonar and ROV technology, to micro-weather studies, to acoustic studies of importance to the U.S. Navy, to the effects of wind gusts and shear turbulence on commercial aircraft, to studies related to dinosaur and mammal locomotion, to studies related to Green Hotels in New Jersey. This work has been supported by a combination of College funds such as R&PD, the National Oceanographic and Atmospheric Agency (NOAA), the Federal Aeronautics Administration (FAA), the Army Corps of Engineers, and the State of New Jersey’s Department of Environmental Protection.

On behalf of the faculty, staff, and students of the School of Natural Sciences and Mathematics, I would like to thank the College for continued support of our facilities both on campus and at the Nacote Creek Field Station and in particular a special note of gratitude for the funding of the construction and outfitting of the Unified Science Center which opened in September 2014, and Unified Science Center2 presently in design and expected to be operational September 2017.

I’m delighted to introduce the recent faculty activities in The School of Social and Behavioral Sciences. Their efforts in scholarship and engagement demonstrate a commitment to both individual development and social wellbeing. They seek to understand the impact of physical and mental health, cognitive performance, spirituality, political behavior, cultural norms, and societal problems. Their work in disaster preparedness, employment and economy, and global awareness focus on important and timely topics.

Please join me in congratulating the Social and Behavioral Sciences faculty for their accomplishments and contributions.
