Areas of Teaching Expertise in Musculoskeletal Physical Therapy:

epidemiology of musculoskeletal problems
introduction to The Guide to Physical Therapy Practice
examination and evaluation principles
radiological assessment
program and discharge planning
clinical decision-making tree
range of motion exercise techniques
physiology and psychology of stress
psychosocial management and documentation
neoplastic and infectious conditions, including upper and lower extremity amputations and prosthetics
assessment of terminally-ill patients
death and dying concepts
hospice care
management of tubes and tubing
isolation techniques
degenerative, metabolic and immunological condition concepts and theories of aging
nutrition principles
home health care
functional and environmental assessments
adaptive equipment
pool therapy
wheelchair prescription and management
ultraviolet and infrared
pain management techniques
total joint replacements
joint protection and work simplification techniques
evaluation of disoriented and noncommunicative patients
