Overview

The Levenson Institute of Gaming, Hospitality and Tourism (LIGHT) has been commissioned by the Council on Compulsive Gambling of NJ (CCGNJ) to research the issue of college students’ perspectives and behavior associated with gambling. The study consisted of a survey, which sought to identify college students’ view of gambling and whether they, or their friends, gamble.

The study focused on identifying the incidence and perspectives of gambling amongst students at Stockton University. It was administered during the Spring 2016 semester (January – April 2016). The study attempted to identify attitudes and behavior of gambling by gender, under 21 vs. over 21, video game behavior, and the means in which they are funding their education (i.e., via student loans, endowments or family funded). Stockton University serves as an optimum place to initiate this pilot research project given its proximity to Atlantic City, one of the country’s leading gaming destinations, and diverse student population, where a variety of racial and ethnic backgrounds are available to participate in the survey.
Survey Instrument

LIGHT, created a survey instrument (Appendix B) consisting of 22 questions, including:

- General demographic information (i.e., age, gender, class standing, ethnicity)
- Social media/internet sites frequented
- Frequency, type and means of video game play and related game purchases
- General view of gambling activity (i.e., positive, negative, neutral)
- Involvement in gambling activity and, if so:
  - Frequency of gambling activity
  - Age when subject first gambled
  - How money used to gamble is acquired
  - Who is aware of their gambling activity (i.e., mother, father, guardian, sibling, friend, teacher)
  - How likely subject will gamble in the future
- Whether subject is aware of friends gambling
Methodology

The survey was created as an on-line survey in Survey Monkey. An email was sent to the entire Stockton University student body inviting them to complete the survey (Appendix A). The email included a link to the survey, a brief description of the purpose of the survey and an explanation that the survey is voluntary. The email generated a very small number of responses (less than 50).

The administering professor then sent an email to Stockton Faculty requesting to visit their classrooms to ask students to complete the survey during class time. Eleven classrooms were visited. The professor explained the purpose of the survey and wrote the URL of the survey monkey link on the white board in the front of the class. Students were told that the survey was anonymous, voluntary and that they could decline to answer any particular question that they did not wish to answer for any reason. Student’s used their smartphones to complete the survey.

Students were offered a promotional item from the CCGNJ in appreciation for their time. The promotional items were very popular among the students. Items were distributed to any student who requested one without verifying whether or not they actually completed the survey. Informational pamphlets were also available for students. This method was very effective resulting in more than 200 completed surveys.
Demographics

258 completed surveys were collected between March 28 and April 21, 2016. 65% of respondents were female, 58% were over the age of 21, 81% were Caucasian and 68% were juniors and seniors. 57% are funding their education through student loans.

Internet Site Behavior

Not surprisingly, college students visit the Internet, specifically social networking sites, regularly. Only 1 out of 258 respondents reported not visiting Internet Sites. 200 or more reported visiting the Social Networking Sites of Instagram, Facebook and Snapchat on a regular basis. This represents approximately 78% of the respondents. YouTube, Twitter, Pandora and Pinterest are also popular sites among this population.

College students spend a significant amount of time on the Internet. 70% of respondents report spending 3 hours or more on average each day visiting these Internet sites. Mobile devices are by far the most popular device for accessing the Internet (97%) followed by computers (65%) and tablets (21%).

**Video Game Behavior**

While fewer college students report playing video games than visiting the Internet, those students still represent a majority of the respondents in the survey. 56% of respondents (136) report playing video games on a regular basis. Students in the survey spend less time playing video games than they do on the Internet. Most students who reported playing video games (61%) spend on average 1 - 2 hours per day playing the games.

The specific games played vary widely because of the vast number of choices in the marketplace. Of the games listed, Cards Against Humanity was the most popular. The “other” category contained a wide variety of games with no one game appearing predominantly. Candy Crush was listed 3 times which was the game listed most often in the “other” category. In retrospect, a more effective way to survey this factor would have been to ask about the type of game played. For example, first person shooter, role-playing games, puzzle games, etc. The smart phone was the most popular device (48%) on which students play video games.

Gambling Perceptions and Behavior

The graph depicting student’s perception of gambling as an activity follows the pattern of a typical bell curve. Most students in the study (65%) have a neutral view of gambling with 14% positive and 22% negative. Most students (59%) have gambled at least one time in the past. 28% reported that they currently gamble and 48% report that it is likely they will gamble in the future. 77% of those who gamble, report getting the money to gamble from their job.
Do you currently gamble for money?

# of people
Gambling and Age

There is a noteworthy amount of underage gambling among college students. 27% of the total respondents (68 people) reported they first gambled under the age of 20 years old. Additionally of those students in the study that reported their age as under 21, 36% (39 people) reported gambling at least one time in the past. Nine students under the age of 21 reported that they currently gamble.

Gender Differences in Gambling Behavior

The study clearly supported the notion that males gamble more than females. 54% of males compared to only 22% of females reported currently gambling for money. Males also reported gambling more frequently. Of those respondents who reported gambling in the past, 9% of males reported gambling frequently in the past compared to only 2% of females. Males also reported a higher likelihood that they will gamble in the future. 62% of males reported somewhat likely to very likely to gamble in the future compared to 41% of females.

Video Gamers and Gambling Perception/Behavior

The perception of gambling as an activity among people who play video games is very similar to those who do not play video games with the highest percentage having a neutral perception. Video gamers in the survey reported gambling more frequently in the past than non-gamers. 64% of people who play video games reported gambling at least one time in the past compared to 52% of people who do not play video games. Video gamers also report their first gambling experience taking place at a slightly younger age. 46% of video gamers reported first gambling under the age of 20 compared to 37% of those who do not play video games. 37% of video gamers reported that they currently gamble compared to 33% of non-gamers. Additionally, 49% reported a likelihood of gambling in the future compared to 47% of non-gamers.

</table>
Of those respondents who have reported playing video games, those who have made purchases to extend game play are more likely to gamble. 40% of those video gamers who reported making purchases to extend play reported that they currently gamble compared to 31% who never made purchases. 7% of those gamers who made purchases to extend play reported gambling frequently in the past compared to zero for those who have never
made purchases to extend play. Finally 18% of video gamers who have made purchases report they are very likely to gamble in the future compared to only 8% of those gamers who never made purchases.

Problem Gambling

4 out of 157 respondents who said they have gambled reported that gambling has caused serious problems in the past three months. This represents 2.55% of respondents who gambled and 1.55% of total respondents.

Of those who responded that gambling has caused serious problems
- 2 were women and 2 were men
- 2 were juniors and 2 were seniors
- All were white
- 1 was under 21
- 2 played video games and 2 did not
- 1 reported making purchases to enhance game experiences
- Only 1 of the 3 viewed gambling as negative
- 2 first gambled between age 17–19 and 2 first gambled between 20 and 22
- 3 reported gambling occasionally and one frequently
- 2 currently gamble and 2 do not
- 4 report getting the money to gamble from their job and 1 also reported getting money from his or her parents.
- 3 reported that they are somewhat unlikely to gamble in the future, one reported somewhat likely
Appendix A – E-mail to Stockton Students

You are being invited to participate in a research study about gambling amongst college students at Stockton University. Jane Bokunewicz, an Assistant Professor of Hospitality at Stockton University and the Levenson Institute of Gaming Hospitality and Tourism (LIGHT) Fellow for 2015-2016, is conducting the study for the Council on Compulsive Gambling of New Jersey, Inc. (CCGNJ).

If you choose to participate you will be asked to complete an online, 22 question survey. The survey will take less than 5 minutes to complete. You may access the survey using the following link.

https://www.surveymonkey.com/r/collegegamblingstudy

The survey will attempt to measure whether a relationship exists between gambling and social media/video games, if wagers are placed on such games, as well as whether students wager on college/professional sports.

The survey is completely anonymous. No identifying information will be collected and results will only be presented in aggregate form. By completing the survey you are voluntarily agreeing to participate. You are free to decline to answer any particular question you do not wish to answer for any reason. You can terminate the survey at any time.

If you have questions about the survey, please contact Jane Bokunewicz at jane.bokunewicz@stockton.edu or 609 703-1946.

Your participation in this survey will help the CCGNJ to understand gambling perspectives of college students to assist in their mission of education and advocacy of the treatment of compulsive gambling. It will be very much appreciated.
